Responsibilities:

➤ Implemented functionality.

Project Profile:

Project Profile: IndigoSMS

Environment: J2ME

Duration : March 2010 to November 2010

Description

Indigo SMS™ is a secure mobile text messaging application that allows the exchange of encrypted text messages between Indigo SMS™ customers. Whether you are using Indigo SMS™ software for work or home, you can do so with the peace of mind that your communications will be viewed only by their intended recipient. Simple to use and packed with features, the Indigo SMS™ platform allows you to choose how you communicate in your mobile environment.

Responsibilities:

- Implementing the recurred functionality.
- Resolving Jira Issues.
- Given training to Fresher's about J2ME Technology.

Project Profile:

Environment J2ME, BlackBerry

Duration March 2009 to March 2010.

Description :

Padisys is an innovative product to be used initially during the execution of clinical trials to capture patient information during treatment regimen and site visits. As technology matures, future versions of the product would incorporate wireless health diagnostics encompassing a broad range of interfaces to monitoring devices that enable physicians, end-users and caregivers to cost-effectively diagnose and monitor health conditions, thus reducing costly site visits.

The key differentiator for the Padisys system is that, the product will be built to run on mobile devices, web access and web services – empowering patients and site coordinators to capture data in a timely manner, thus improving compliance many folds and at the same time providing much better access to information to investigators.

Responsibilities:

- Developing Mobile Screens.
- Developing RMS and GCF functionality.
- Deploying application

Role:

- Development of User Interface screens (GUI) using LCDUI.
- Implementing Business logic for database access using BlackBerry Mobile and JDBC for connecting to Oracle with Tomcat.
